

Job Predictor

INSTRUCTIONS TO MAKE A JOB PREDICTOR

1. Carefully cut out the square below.

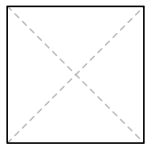

2. Fold the square in half diagonally to make a triangle.

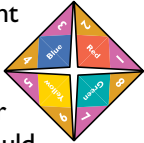

3. Fold it in half again along the long side and line up to the points. You should have a smaller triangle.

4. Open all the folds so that it is a square again with the white side facing up.

5. Fold each point into the center so that the four points touch. Your job predictor should look like a square. You will also see numbers.

6. Flip the sheet over. Fold the corners into the center to form another smaller square.

7. Fold the square in half. Open it and fold it in half the other way.

8. Put one finger in each of the color flaps. Your job predictor is now ready to use.

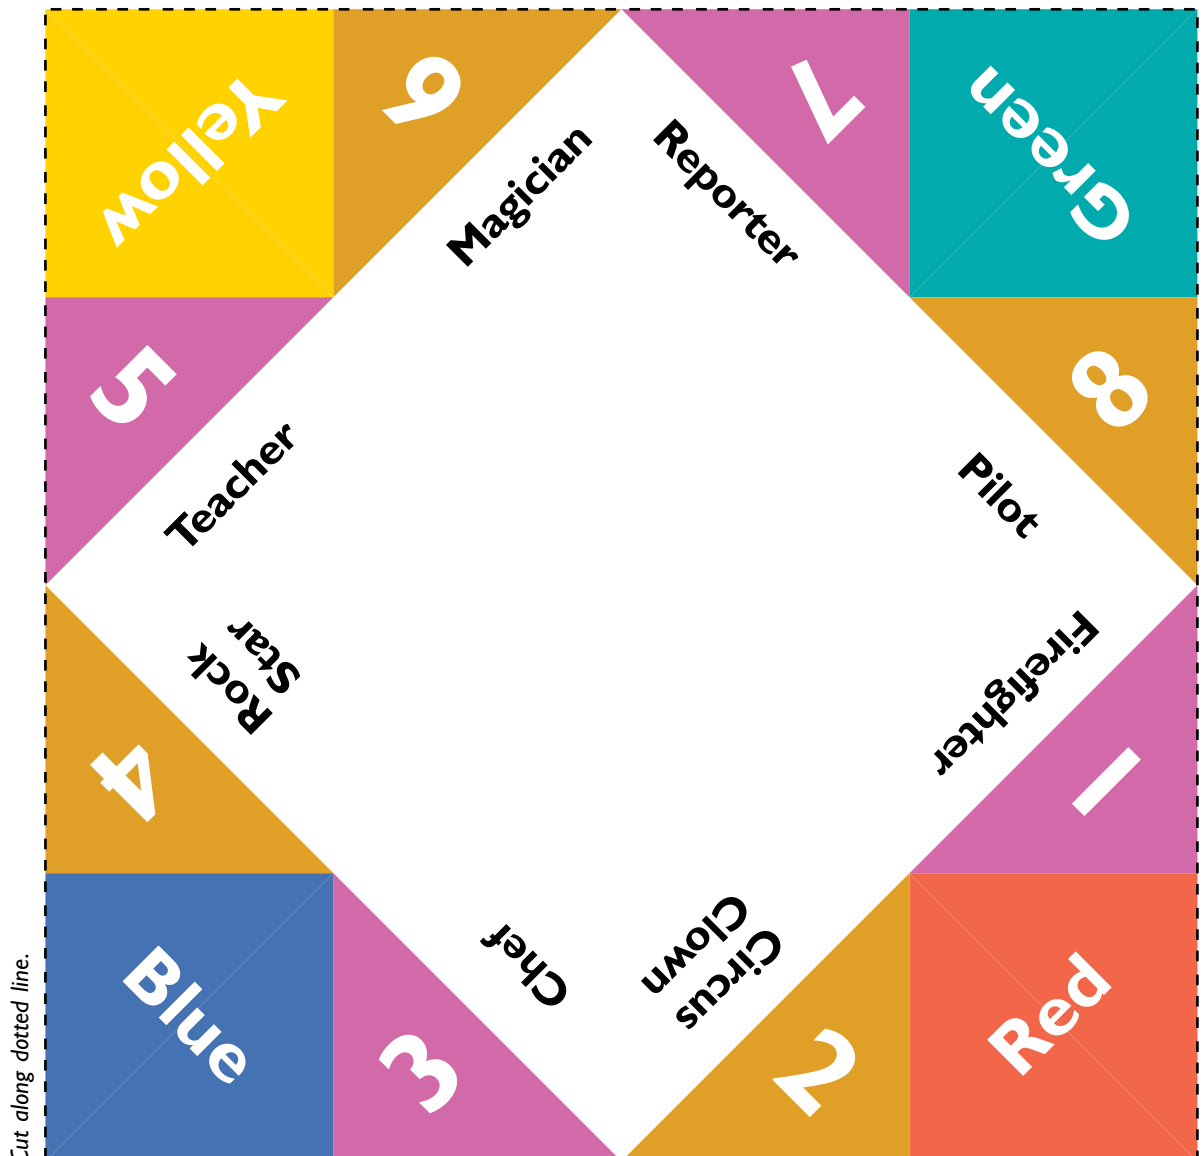

How to Play

1. Ask a friend to pick a color. Spell that color while moving the predictor back and forth.

2. Ask your friend to pick a number. Count to that number while moving the predictor.

3. Ask your friend to pick another number. Lift the flap and reveal the job your friend will have.

4. Use this sample to create your own predictor.

Cut along dotted line.
